- Sandbox malicious URLs and attachments with predictive technology
- Automate email encryption
- Ensure policy-driven email data loss protection
- Secure email with a 24/7 year-round emergency inbox
- Use a modern, intuitive interface
- Work with per-user controls and quarantine access

Proofpoint Essentials Email Security Advanced + is a package that offers advanced email security and compliance to small and medium-size businesses. It helps you protect your people from malware-based threats like emails that contain malicious attachments and links. It also defends against malware-free threats like email fraud and credential phishing. And it helps you defend against attacks across social media channels.

Its built-in data loss prevention (DLP) and email encryption secures sensitive information sent in emails. And its email continuity features help keep your communications up and running at all times.

Proofpoint Essentials Email Security Advanced + gives you some of the same enterprise-class security and visibility that many of the world's largest organizations enjoy. Its antivirus, anti-spam and phishing-detection engines protect you against email-borne threats. They scan all of your emails. And they capture and block all known viruses. The engines surface unknown email threats as well. And they protect you against them in real time.

Proofpoint Essentials Email Security features a modern, intuitive interface. This lets your administrators easily access a detailed breakdown of specific threat types. They can also see the frequency of attacks. This gives them a view on the big picture of the threat landscape. And it allows them to make more informed decisions when dealing with security issues.

Advanced Threat Protection

Proofpoint Essentials Email Security Advanced + protects your people from messages that entice them to click on a link or open an attachment. It uses the power of Proofpoint Targeted Attack Protection. Targeted Attack Protection is our email analysis solution.

URL Defense

URL Defense protects against the latest URL-based email threats, including malware and credential phishing. It offers predictive analysis that runs continuously in the background to identify and sandbox suspicious URLs. It also performs real-time sandboxing during every URL click. And it transparently rewrites all URLs that reach inboxes. This protects users on any device on the network.

Attachment Defense

Attachment Defense protects against known and unknown threats delivered through attachments. These include threats hidden in many file types as well as attachments with embedded URLs and those that are password-protected.

DLP and Content Filtering

Proofpoint Essentials Email Security Advanced + features our policy-driven DLP filter. Its built-in term dictionaries and smart identifiers help you stay compliant. This helps reduce risk when your people make security and disclosure policy decisions. It also secures outgoing sensitive information. This can include PII, PHI, financial information and GDPR terms.

One-Click Message Pull

One-Click Message Pull lets your administrators flag emails that contain security threats or policy violations. They can pull

these emails quickly from a user's mailbox. This can reduce the time your teams spend on management and remediation.

Automated Email Encryption

Proofpoint Essentials Email Security Advanced + features automatic email encryption. This mitigates the impact of the loss of data or customer information, which often results in fines, negative publicity and loss of customer trust.

Email Warning Tags

Email Warning Tags provide short descriptions of potential threats and convey the level of risk associated with them. The tags are customizable and mobile responsive. And they allow users to block a sender directly through the tag. This way your users get the information they need to make informed decisions about emails that fall into the gray area between clean and malicious. And there is less of a chance that users become compromised.

Business Continuity

Proofpoint Essentials Email Security Advanced + keeps your business email up and running when a disaster strikes. It features an emergency inbox. This inbox includes instant replay of lost or deleted emails over the last 30 days. And it offers email spooling to keep your business going.

Social Media Account Protection

With Proofpoint Essentials Email Security Advanced +, you can keep up to three branded social media accounts compliant and protected against hacking and spam. You can choose from Facebook, Twitter, YouTube and Google Currents (Google+).
